## Profile

---

- I am junior Front-End Developer. My journey in Web-Development started when I first encountered real programming at university. I always had interest in computers and relative with it things. Though, I had encountered programming before, but for lack of a goal, I quickly abandoned. Now, I get basic knowledge of C++ at university and it helped me to enter in Web-Development. In a programming I like exploring how things work in it and also solving different kind of tasks.
